

ASSIGNMENT 2 - writing assignment

Choose between alternatives A and B and submit the assignment as instructed (including sources).

Alternative A

- Find an interesting article that describes the use of GIS in your field of study.
- Write a 1-2 page summary of the problem that was solved, emphasizing issues that were unclear and left you with questions.
- The summary should be in your own words, not the author's.
- You do not have to describe GIS methods, just how GIS was used to solve the problem.

Alternative B

- Based on your new understanding of the potential of GIS, think of a problem or a service from your daily life experience, or from the daily life of the society at large, that could benefit from the use of GIS. It can be anything.
- Write ½ to 1 page explaining your idea and arguing for it. Remember you are not being asked to explain 'how' it can be done or 'how' it should be done. Just explain what should be done.

Home assignments always due a week later.
